### Doffing Type C PPE

**Step 1.** The donning partner shall begin by removing the duct tape from cuffs and ankles. Every disposable item removed is to be placed onto the donning pad. Non-disposable items are:
- Powered Air Purifying Respirator
- PAPR battery pack
- PAPR tubing
- PAPR belt
Non-disposable items are to be placed on the table for cleaning.

**Step 2.** Do not turn off the PAPR:
- Undo the PAPR belt.
- Place the PAPR unit on stable surface.

The Donning Partner will:
- Wipe the PAPR tubing, battery pack, and belt with bleach wipes.

**Step 3.** The care giver will prepare for removal of the suit by pulling the outer layer of the hood up.

The donning partner may now remove the seal and unzip the suit.

**Step 4.** The donning partner will remove the suit by rolling the suit inside-out and downwards towards the ankles.

Avoid touching the scrubs.

Stop when the ankles are reached.

**Step 5.** Note: When the suit is pulled from the arms, the outer gloves will remain in place, but the cuffs will fold outwards. The outer gloves may now be removed using glove-in-glove technique and placed on the donning pad.

**Step 6.** The care giver will step out of the suit onto the floor with the booties still on.

The donning partner will assist with removing the inner booties and place them onto the donning pad.

Avoid touching the scrubs.

**Step 7.** Doffing partner will now:
- Switch the PAPR unit off and disconnect PAPR tubing from the PAPR blower unit.

**Step 8.** Remove the hood by pulling the outer layer together overhead and use a forward-up-and-over-motion.

Place the hood onto the donning pad.

**Step 9.** Remove exam gloves using glove-in-glove technique. Dispose of gloves onto the donning pad with the discarded suit and hood.

**Step 10.** Perform hand hygiene using hand sanitizer and proceed directly to a sink and wash your hands and forearms.

**Step 11.** Rehydrate.
- Record donning information on the Doffing Type C PPE Checklist and proceed to the shower.

**Step 12.** The donning partner will retrieve the PAPR tubing and gather the corners of the donning pad to enclose the discarded PPE.
Place the bundle into a biohazard bag, and attend to reusable items.
Note: The table and floor should be considered ‘contaminated’ and wiped with bleach wipes.
