

Administration of a gluteal injection of Rocephin

- For a solution concentration of 250 mg/ml, reconstitute the 250 mg vial by adding 0.9 ml of plain lidocaine into the vial, shake thoroughly to form a solution and withdraw 1.0 ml (250 mg) into a syringe to equal the total labeled dose.
- Aspirate prior to injection.
- Inject deeply into a large muscle in the area indicated by the "injection site" on the diagram, avoiding the sciatic nerve.
