119 UNMC medical students receive residency assignments through Match Day Program

A total of 119 senior medical students at the University of Nebraska Medical Center have received their residency assignments through the National Resident Matching Program. The program, a private, not-for-profit corporation, was established in 1952 to provide a uniform date of appointment to residency positions, which last from three to five years and allow newly-graduated physicians to specialize in an area of medicine.

Match Day, an annual event held at the same time at medical schools nationwide, is designed to optimize the rank ordered choices of students in medical programs. Of the 119 students, 39 percent are staying in Nebraska for their training programs. Thirty-six percent will do residencies at UNMC and The Nebraska Medical Center, UNMC's hospital partner.

The students, who will graduate May 5, are listed by hometown, name, specialty and residency assignment.
